23.10.2014 from 17:00h - 18:30h

During one hour a statue made of frozen holy water melts. In the statue is a spot with real vaginal scent! When the Madonna melts the vaginal scent starts to mix with the holy water. In the room you start smelling the beauty of woman. When touching the melted liquid, the original vaginal scent stays on your finger for a long time.

The Deflowering from Peter De Cupere on Vimeo .

The smell of the pussy is real vaginal scent conserved as odorous substance and realized by a professional lab in Germany. The smell is produced by movement and sweating in the female intimate area. It took years to manage to capture the treasured organic vaginal scent. The scent is a mix of different women, of different origin and is a tribute to the freedom of being a free woman, exploring your sexual desires.

The work only will be on show during 2 hours, starting from the melting. After +/- 1 hour the vaginal scent will appear in the air. After melting, visitors are allowed to touch the melted Madonna and enjoy her scent of passion.
